

JavaScript Array Methods — Quick Reference

Here is a list of major JavaScript array methods, each with a brief description and common use:

Method	Description	Usage Example
<code>push()</code>	Adds one/more elements to end	Add item
<code>pop()</code>	Removes last element	Remove item
<code>shift()</code>	Removes first element	Remove start
<code>unshift()</code>	Adds element(s) to start	Add at start
<code>concat()</code>	Merges two+ arrays	Combine arrays
<code>join()</code>	Joins elements to string	To CSV/text
<code>slice()</code>	Returns a sub-array	Get part
<code>splice()</code>	Adds/removes elements at index	Edit array
<code>indexOf()</code>	Finds first index of value	Search
<code>lastIndexOf()</code>	Finds last index of value	Reverse search
<code>includes()</code>	Checks if value exists	Existence
<code>forEach()</code>	Runs function on each item	Iterate
<code>map()</code>	Transforms each item	Change values
<code>filter()</code>	Selects items that pass test	Find subset
<code>reduce()</code>	Combines items to single value	Total/Summary
<code>find()</code>	Returns first matching item	Find specific
<code>findIndex()</code>	Index of first match	Position search
<code>sort()</code>	Sorts elements	Order list
<code>reverse()</code>	Reverses order	Flip array
<code>every()</code>	True if all items match test	All pass?
<code>some()</code>	True if any item matches test	Any pass?
<code>flat()</code>	Flattens nested arrays	Simplify array
<code>fill()</code>	Fills array with static value	Set values
<code>copyWithin()</code>	Copies items within array	Rearrange

Method	Description	Usage Example
<code>toString()</code>	Converts to string	To text
<code>from()</code>	Creates array from iterable	Make array
<code>at()</code>	Gets value at index	Direct access

These are the most commonly used JavaScript array methods for manipulating, searching, and transforming arrays.
